FYB TECHNOLOGIES

Functional QA Report

Website testing - 1 October 2026

https://dev-jira.fybtech.xyz/projects

54	2	4
Functional checks	Reproduced defects	Follow-up observations

Assessment: further validation required

Core workflows passed, but this run does not support an all-functions-correct sign-off. This PDF preserves the complete report, all expected and actual results, remaining coverage, and all seven saved screenshots.

Contents

1. Test context and outcome
2. Reproduced defects
3. Observations requiring follow-up
4. All 54 executed checks
5. Retained test data and coverage limitations
6. Recommended next steps
7. Screenshot evidence appendix

Test date: 1 October 2026 (Asia/Shanghai)
Target: https://dev-jira.fybtech.xyz/projects
Account: rafael.pineda@patolomius.com - confirmed SuperAdmin in Account Management
Method: Interactive browser testing through the Codex in-app browser, with DOM/accessibility observations and screenshots. Desktop layout only. No source-code, API, database, load, or security testing.

Outcome

Not ready for an “all functions correct” sign-off. Core project and issue workflows passed, but two reproducible data-display defects were found. Four additional observations need follow-up. Several functions were inspected without submitting changes, and the browser stopped responding during the final sprint check.

Expected results below are based on control labels, ordinary application behavior, and consistency between the application's own views. No requirements specification or acceptance criteria were supplied. A page loading successfully is not evidence that all operations on that page work.

Project creation initially produced no visible result in two attempts. A later attempt with the same conventional key succeeded and was verified. **The earlier attempts are inconclusive, not a confirmed creation defect.** Some UI actions also required reinspection or direct navigation to an already observed link; these interaction anomalies were not counted as site defects.

Reproduced defects

D01 - Admin dashboard reports zero users despite populated account directory

Severity: Medium - misleading administrative metrics.
Routes: /admin, /admin/accounts

1. Sign in with the supplied account.

2. Open Admin.

3. Observe Total Users = **0**, Active Users = **0**, and “No user data available.”

4. Open See users, then search for rafael.pineda.

5. Observe Account Management statistics: **253 total, 38 active, 215 inactive, 15 admins**, with a matching active SuperAdmin account.

6. Return to Admin. Zero user totals remain after fresh navigation.

Expected: Dashboard totals and recent-user content agree with the account directory, or display an explicit loading/error/unavailable state.
Actual: Dashboard presents zero as a valid total while the directory contains users. Its Recent Activity also says “No audit logs available,” although the Audit Logs page contains the QA changes.

Evidence: Admin dashboard (evidence appendix), Account directory (evidence appendix).

D02 - Gantt displays invented dates for an undated epic

Severity: Medium - misleading project schedule.
Routes: /projects/SPS/epics, /projects/SPS/gantt

1. Create QA Regression Epic 20261001 with a name and description only; leave start/end dates blank.

2. Open the created epic, key **SPS-0FEBD0**.

3. Its Timeline says **Start: Not set; End: Not set** and it has zero issues.

4. Open Gantt.

5. The same epic is labeled **Oct 1, 2025 → Oct 1, 2027** and is represented by a bar across that range.

Expected: An epic without dates or dated child issues appears as unscheduled, or any visualization fallback is clearly identified as an estimate and not shown as its actual dates.
Actual: A concrete two-year schedule is displayed without an indication that dates are unset.

Evidence: Gantt schedule (evidence appendix). The epic detail's “Not set” values were recorded through the DOM snapshot; no detail screenshot was saved before the browser interruption.

Observations requiring follow-up

O01

OBSERVATION	Sample Scrum overview and Issues list disagree on counts. Before QA additions: overview 12 active / 1 archived; list 14 active / 3 archived. After parent and child creation: overview 13 active / 1 archived; list 16 active / 3 archived.
EXPECTED RESULT / FOLLOW-UP	Define whether subtasks count. Use consistent labels or explicitly state that overview excludes them. Differences may be an intentional counting rule, so this is not classified as a confirmed defect.
EVIDENCE AND CONFIDENCE	Overview (evidence appendix); issue-list DOM observations.

O02

OBSERVATION	Empty QA sprint's Velocity Report shows Average Completion Time **3.2 days** despite zero issues and “No completed sprints yet.”
EXPECTED RESULT / FOLLOW-UP	Show unavailable/zero, or label a benchmark and explain its source. Validate the metric's intended scope.
EVIDENCE AND CONFIDENCE	Observed report text; final screenshot/reproduction was blocked by browser timeout.

O03

OBSERVATION	Global search for existing SPS-19, including Enter, left Settings unchanged without visible results.
EXPECTED RESULT / FOLLOW-UP	Existing issue should be discoverable, or the search interaction should be explained. Recheck with a standard browser before filing a defect.
EVIDENCE AND CONFIDENCE	Search state (evidence appendix). No search result appeared in successive observations.

O04

OBSERVATION	Issue Export produced no visible menu, confirmation, or captured download on a filtered issue list. A second attempt with a download listener timed out after 10 seconds.
EXPECTED RESULT / FOLLOW-UP	Export should produce a file or explicit feedback. Verify browser download support and repeat before attributing the failure to the site.
EVIDENCE AND CONFIDENCE	Browser test observation; download contents unverified.

Executed functional checks

PASS means the stated result was visibly verified. **INSPECTED** means the UI loaded; its mutation or business result was not tested. **INCONCLUSIVE** means the outcome could not be established.

T01 - Open Projects while signed out | PASS

EXPECTED	Redirect to login
ACTUAL	/login shown

T02 - Empty login fields | PASS

EXPECTED	Sign-in unavailable
ACTUAL	Sign in disabled

T03 - Uncheck Remember me, enter supplied credentials | PASS

EXPECTED	Submit becomes available
ACTUAL	Checkbox unchecked; Sign in enabled

T04 - Sign in | PASS

EXPECTED	Authenticated application opens
ACTUAL	Dashboard loaded

T05 - Dashboard recent-activity Next | PASS

EXPECTED	Different activity page and usable Prev
ACTUAL	Page 2 of 4; entries changed; Prev enabled

T06 - Projects navigation | PASS

EXPECTED	Project directory loads
ACTUAL	Active project rows and controls loaded

T07 - Project search for nonexistent value | PASS

EXPECTED	Clear empty state
ACTUAL	“No projects found.”

T08 - Project search by name/key | PASS

EXPECTED	Matching projects only
ACTUAL	Sample Project Scrum and later QA project found

T09 - Project sorting control | PASS (mode only)

EXPECTED	Sort mode changes
ACTUAL	Newest changed to Name; ordering correctness across the entire directory not asserted

T10 - Empty Create Project submission | INCONCLUSIVE validation

EXPECTED	Required-field feedback or blocked submission
ACTUAL	No creation, but no visible validation message and Name did not expose native required validation

T11 - Create Scrum project QAFYB | PASS

EXPECTED	Persisted project with correct details
ACTUAL	Name, key, summary, Project Admin role, 0 issues visible

T12 - QA project favorite / unfavorite | PASS

EXPECTED	Toggle persists and label changes
ACTUAL	Unfavorite project appeared; original state restored

T13 - Archive QA project | PASS

EXPECTED	Recoverable confirmation; removed from active list
ACTUAL	Confirmation shown; QA project absent from active list, present in Archived

T14 - Restore QA project | PASS

EXPECTED	Returns to active state
ACTUAL	Removed from archived list; settings show Archived: No

T15 - Edit QA project name | PASS

EXPECTED	Saved value persists
ACTUAL	Name changed to “QA Functional Regression 20261001 - verified”

T16 - Open Sample Scrum overview | PASS (load); counts O01

EXPECTED	Overview and navigation load
ACTUAL	Epics, issues, sprints, members, page links loaded

T17 - Issue search SPS-18 | PASS

EXPECTED	Single matching issue
ACTUAL	One active result, correct key and summary

T18 - Clear issue filters | PASS

EXPECTED	Full list restored
ACTUAL	14 active issues restored before QA additions

T19 - Empty issue creation form | PASS

EXPECTED	Submit disabled without summary
ACTUAL	Create disabled

T20 - Create Task with QA summary | PASS; date defaults require product confirmation

EXPECTED	New task persists
ACTUAL	SPS-19 created with To Do, Medium, Unassigned; dates defaulted to Oct 1-3

T21 - Open QA issue summary | PASS

EXPECTED	Correct issue detail
ACTUAL	Issue-details dialog for SPS-19

T22 - To Do → In Progress / Apply | PASS

EXPECTED	Status persists with history
ACTUAL	In Progress displayed; status and workflow events recorded

T23 - Edit summary and priority | PASS

EXPECTED	Saved values persist
ACTUAL	Edited summary and HIGH priority visible; persisted on reopen

T24 - Assign to me | PASS

EXPECTED	Current account selected and persisted
ACTUAL	rafael.pineda selected; assignment history recorded

T25 - Add issue comment | PASS

EXPECTED	Saved comment, author, timestamp
ACTUAL	QA comment appeared under rafael.pineda

T26 - Watch / Unwatch | PASS

EXPECTED	Toggle and watcher history
ACTUAL	Unwatch appeared; Watch restored; history present

T27 - Bug type filter | PASS

EXPECTED	Only Bug results
ACTUAL	One row, SPS-7, BUG

T28 - Scrum Board load | PASS

EXPECTED	Active sprint issues in status columns
ACTUAL	Two To Do issues in Sample Sprint, other columns empty

T29 - Switch to Swimlanes | PASS (view switch)

EXPECTED	Grouped board view
ACTUAL	Unassigned group with two issues

T30 - Backlog load | PASS (load)

EXPECTED	Sprint/backlog issue sections
ACTUAL	Active/planned sections and QA issue visible

T31 - Create QA sprint in Backlog | PASS

EXPECTED	New planned sprint
ACTUAL	QA Regression Sprint 20261001, planned, 0 issues

T32 - Sprints list/detail | PASS

EXPECTED	Created sprint discoverable
ACTUAL	QA sprint listed and detail opened

T33 - Burndown tab for empty sprint | PASS (empty state only)

EXPECTED	Empty/zero chart values
ACTUAL	Seven days at 0 SP, remaining 0, progress 0%

T34 - Velocity tab | PASS (load); O02

EXPECTED	Report appears
ACTUAL	Type totals 0/0; no completed sprints; questionable 3.2-day metric

T35 - Create QA epic | PASS

EXPECTED	Persisted epic with entered description
ACTUAL	SPS-0FEBD0 created and opened

T36 - Epic Add Issue / Cancel | PASS (open/cancel)

EXPECTED	Form opens and cancellation leaves epic unchanged
ACTUAL	Form opened; cancelled; zero issues at that time

T37 - Gantt load | PASS (load); D02

EXPECTED	Timeline and scheduled issues
ACTUAL	Existing and QA issues loaded with dates

T38 - Calendar Next / Prev | PASS

EXPECTED	October → November → October
ACTUAL	Correct headings; November empty state; QA parent/child visible in October

T39 - Project settings tabs | INSPECTED

EXPECTED	Each configuration section loads
ACTUAL	Details, Story Points, Dependencies, Workflow, Enabled Pages, Groups, Members inspected

T40 - Global Activity filter Oct 1-Oct 1 / Refresh | PASS

EXPECTED	Only selected date's events
ACTUAL	QA events for Oct 1 returned

T41 - Notification Open | PASS

EXPECTED	Correct linked issue opens
ACTUAL	Mention opened FTFYB-3 with matching comment

T42 - Admin Account search | PASS

EXPECTED	Matching account and statistics
ACTUAL	Active SuperAdmin account returned; 253 user total

T43 - Admin analytics | INSPECTED; numerical accuracy not fully validated

EXPECTED	Metrics and project table load
ACTUAL	Type/priority totals and project pagination displayed

T44 - Admin system page | INSPECTED

EXPECTED	Diagnostic status available or explicit unavailable state
ACTUAL	Services and resources report Unknown; maintenance/configuration controls visible

T45 - Audit Logs | PASS (presence only)

EXPECTED	QA changes traceable
ACTUAL	Issue creation/transition/edit/comment/watch and sprint creation records present

T46 - Slack load | PASS (load/empty composer)

EXPECTED	Workspace/channel content and composer
ACTUAL	29Black/general messages visible; Send disabled when empty

T47 - Slack search paging-smoke | PASS

EXPECTED	Matching message results
ACTUAL	50 matching results displayed

T48 - Wiki choose Tististeng / open observed page URL | PASS (read only); sidebar selected option mismatched header after direct navigation

EXPECTED	Selected space and page content load
ACTUAL	Page content, version history, attachments/comments sections loaded

T49 - Wiki favorite toggle | PASS

EXPECTED	Toggle reversible
ACTUAL	Starred link appeared, then removed; original state restored

T50 - Settings Profile / Preferences / Account | INSPECTED

EXPECTED	Tabs load with account's available options
ACTUAL	Profile read-only; preference controls visible; account deletion disabled

T51 - Create subtask on QA issue | PASS

EXPECTED	Child persists under parent
ACTUAL	SPS-20 created; parent shows 0 of 1 done and creation history

T52 - Associate QA issue with QA epic | PASS (selected value); inverse epic count not rechecked

EXPECTED	Association persists
ACTUAL	Selected QA Regression Epic 20261001 and updated issue metadata

T53 - Global issue search | INCONCLUSIVE - O03

EXPECTED	Existing issue discoverable
ACTUAL	No visible outcome

T54 - Filtered issue export | INCONCLUSIVE - O04

EXPECTED	Download/file with filtered data
ACTUAL	No captured download

Test data left for review

No existing project was archived or edited. QA objects were retained for reproduction; no permanent deletion was performed.

• **Project QAFYB:** QA Functional Regression 20261001 - verified; restored, active, unfavorited, Scrum, 0 issues.

• **Issue SPS-19:** QA Regression 20261001 - edited lifecycle; In Progress; HIGH; assigned to rafael.pineda; one QA comment; not watched; associated with QA Regression Epic 20261001.

• **Subtask SPS-20:** QA Regression 20261001 - child task; To Do; under SPS-19.

• **Epic SPS-0FEBD0:** QA Regression Epic 20261001; in SPS; created without dates.

• **Sprint:** QA Regression Sprint 20261001; in SPS; planned; empty. Observed route: /projects/SPS/sprints/qa-regression-sprint-20261001.

The supplied password is deliberately omitted from this report and all report files.

Remaining coverage and limitations

• Authentication negative cases, lockout, forgot-password submission, password change, logout/session expiration, and Remember me persistence remain untested. The session could not be logged out after the browser became unresponsive.

• Kanban-specific creation/board behavior, drag/drop reorder, sprint assignment, sprint start/complete, estimates, capacity, blocked completion rules, and complete workflow-transition combinations remain untested.

• Attachments/uploads/download integrity, issue links, comment editing/deletion, issue archive/restore, permanent deletion, and all export formats remain unverified.

• Settings mutations beyond QA project name, enabled-page persistence, notification delivery/preferences, member/role changes, user creation/edit/deletion, and administrative maintenance remain untested.

• Chat sending, DM/group creation, reactions, thread replies, channel changes, and external notifications were not submitted. Wiki page creation/edit/publish/restore, uploads, and comments were not submitted.

• Multiple user roles, permission isolation, mobile/responsive layouts, cross-browser behavior, accessibility conformance, timezone correctness, concurrent updates, and performance/security were not tested.

• Browser automation timed out on final navigation to the QA sprint. Earlier successful observations and saved screenshots remain valid; the final state is unverified.

Recommended next steps

1. Fix or explain D01 and D02, then retest the two views in each defect.

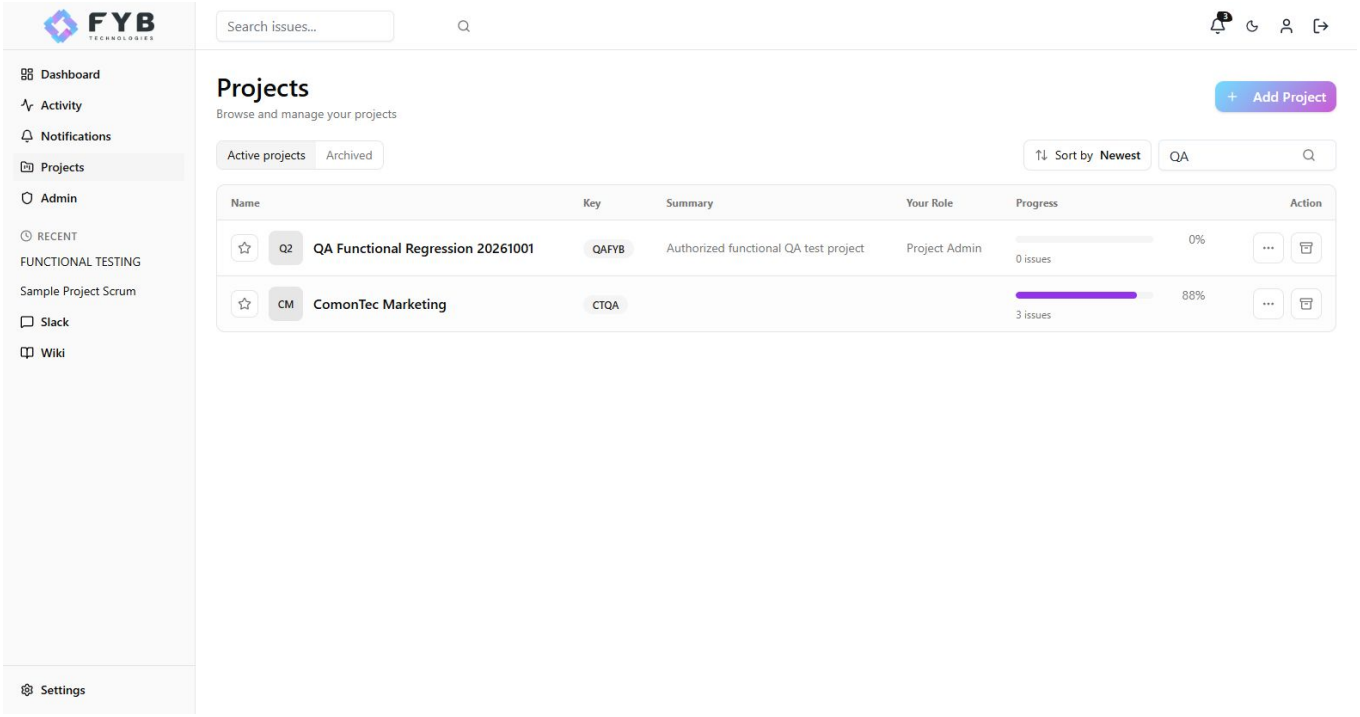

2. Confirm counting rules, completion metric scope, default issue dates, and search/export interactions; reproduce O01-O04 in a standard browser.

3. Finish remaining workflows using approved disposable data and separate role accounts. Require end-to-end persistence and export-content checks before release sign-off.

Screenshot evidence

E01 - QA project creation

The created QAFYB project is visible in the filtered project directory.

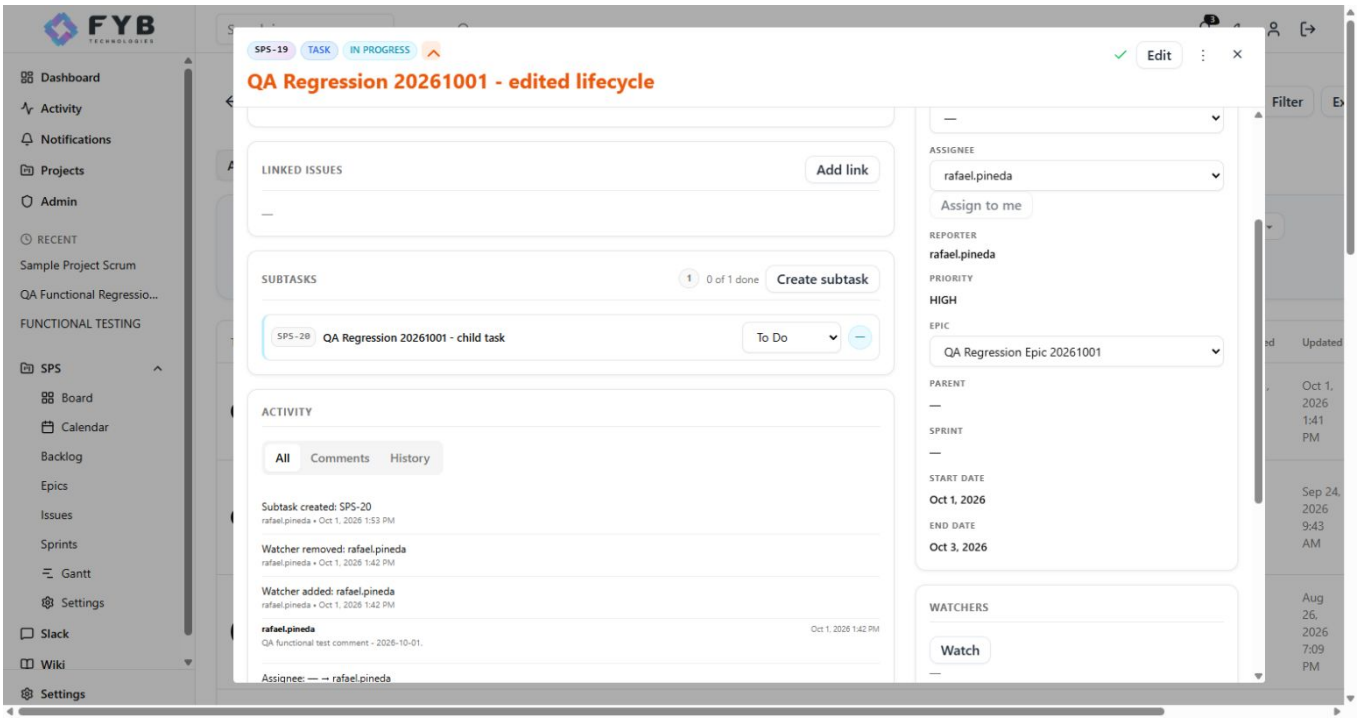

File: project-created.jpg

Screenshot evidence

E02 - QA issue lifecycle

SPS-19 after summary, status, priority, assignment, comment and subtask testing.

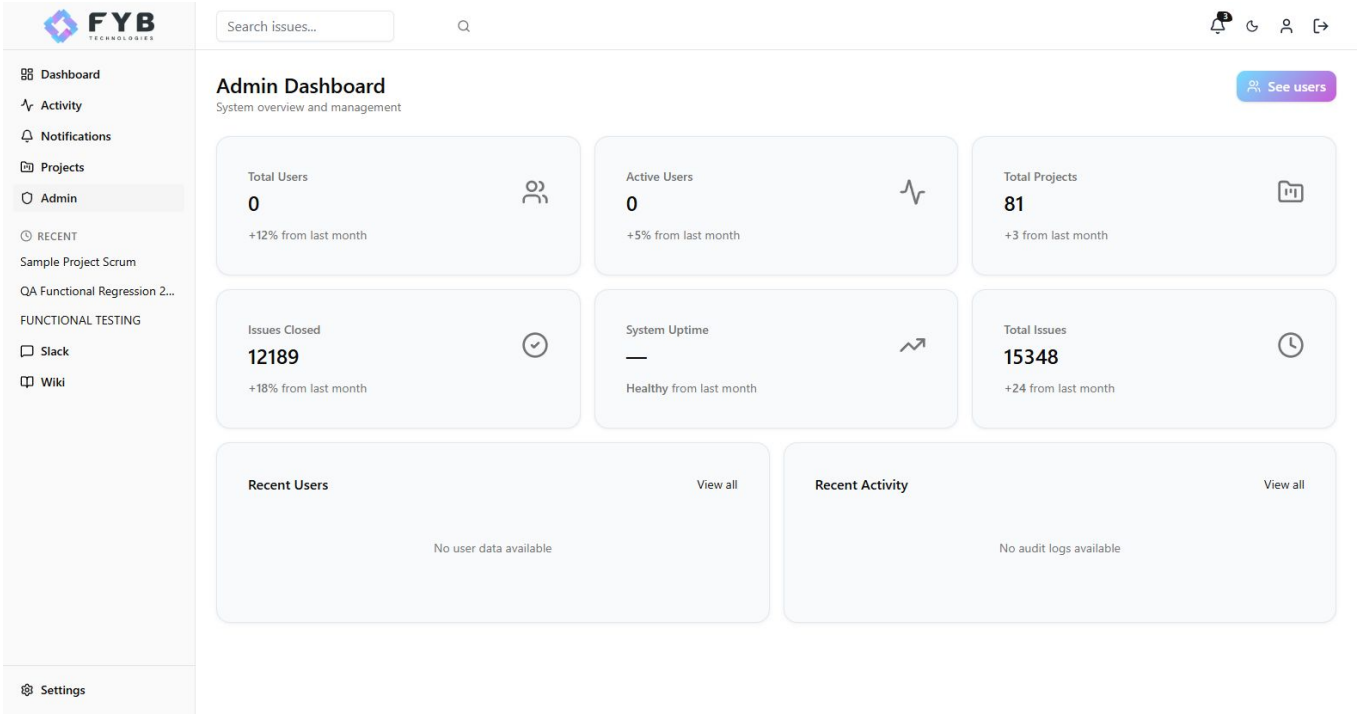

File: issue-lifecycle.jpg

Screenshot evidence

E03 - Admin dashboard (D01)

Dashboard displays zero user totals and unavailable recent-user content.

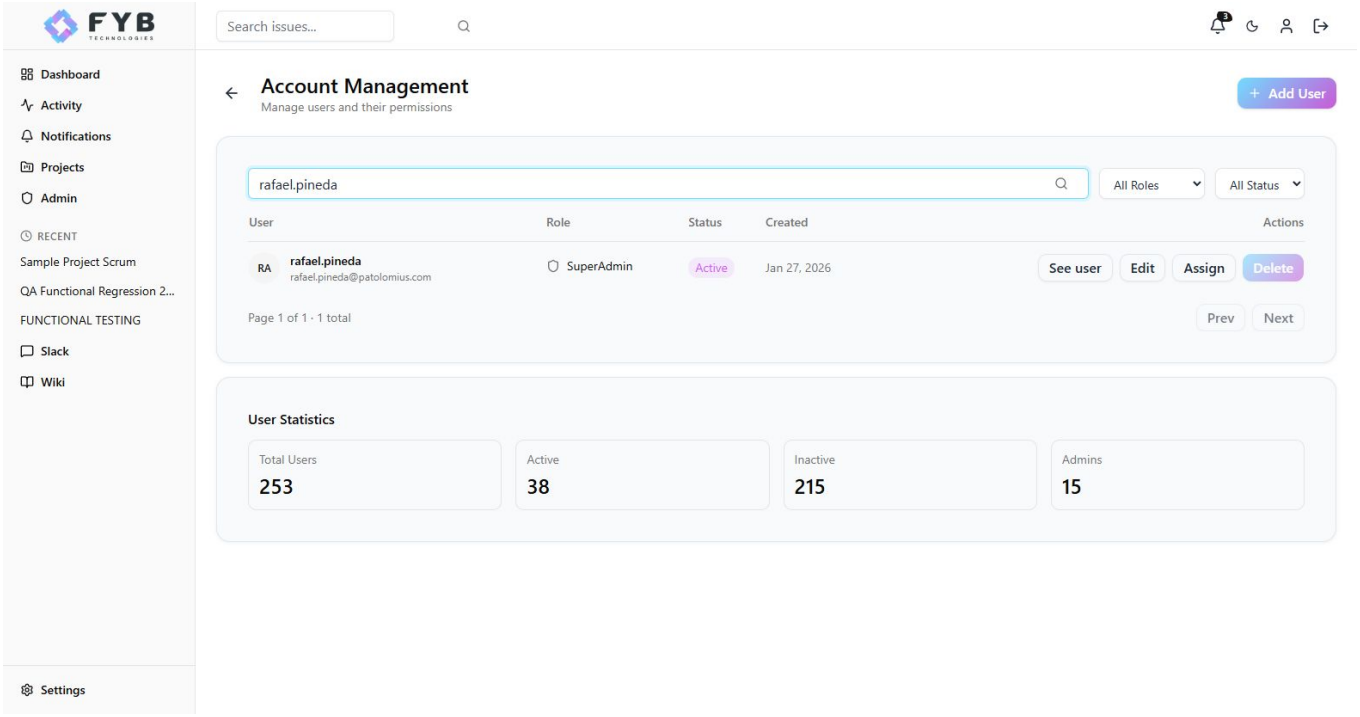

File: admin-zero-users.jpg

Screenshot evidence

E04 - Account directory (D01)

The matching SuperAdmin account and directory statistics provide the comparison for D01.

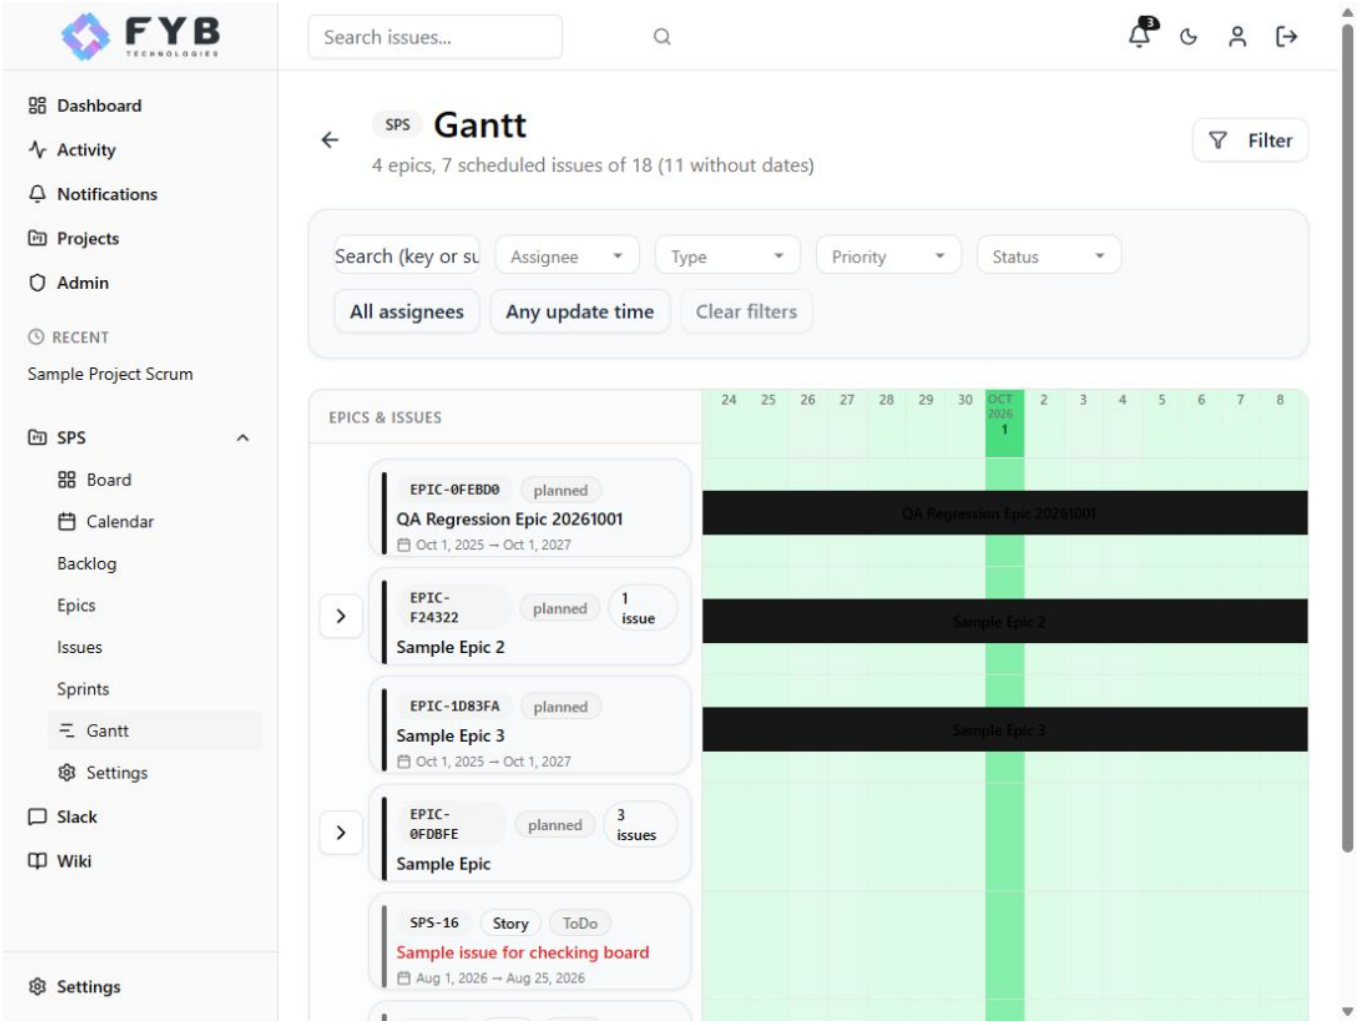

File: accounts-253-users.jpg

Screenshot evidence

E05 - Gantt date display (D02)

The undated QA epic appears with a concrete Oct 1, 2025 to Oct 1, 2027 schedule.

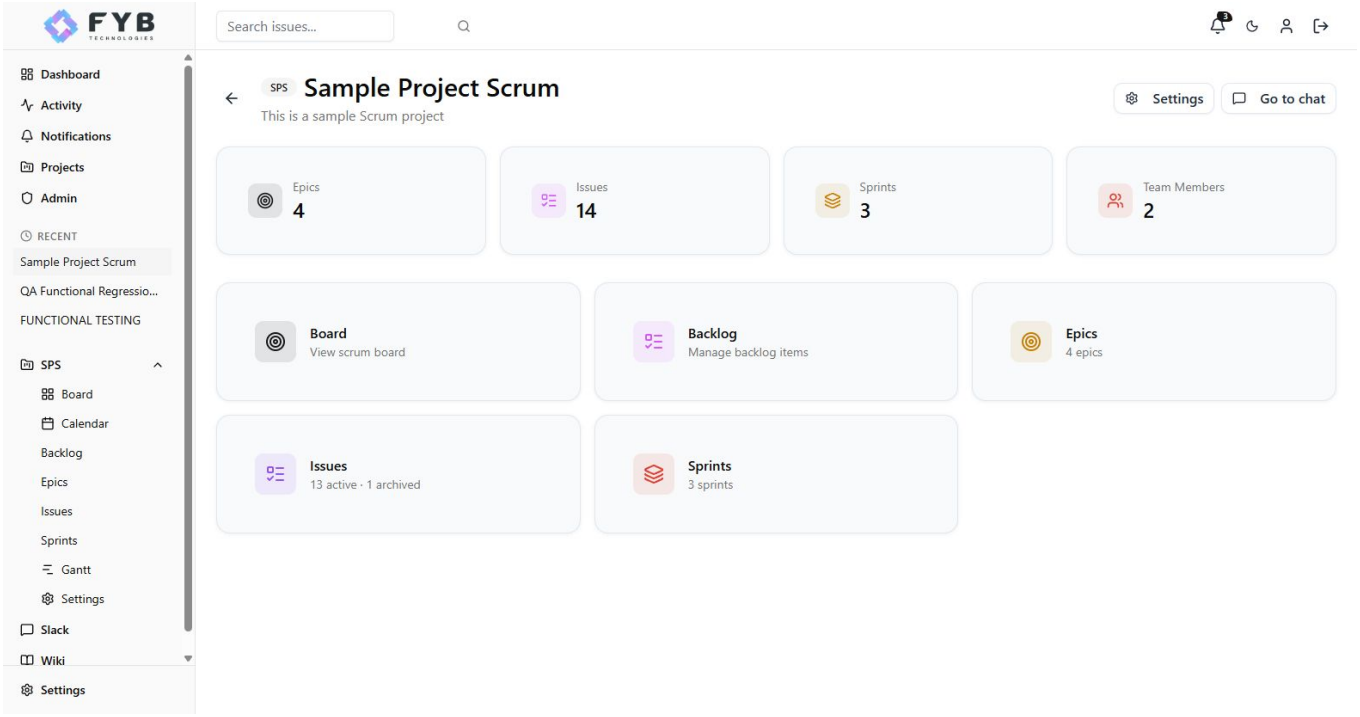

File: gantt-invented-epic-dates.jpg

Screenshot evidence

E06 - Project overview (O01)

Overview counts after QA additions. Counting semantics require clarification.

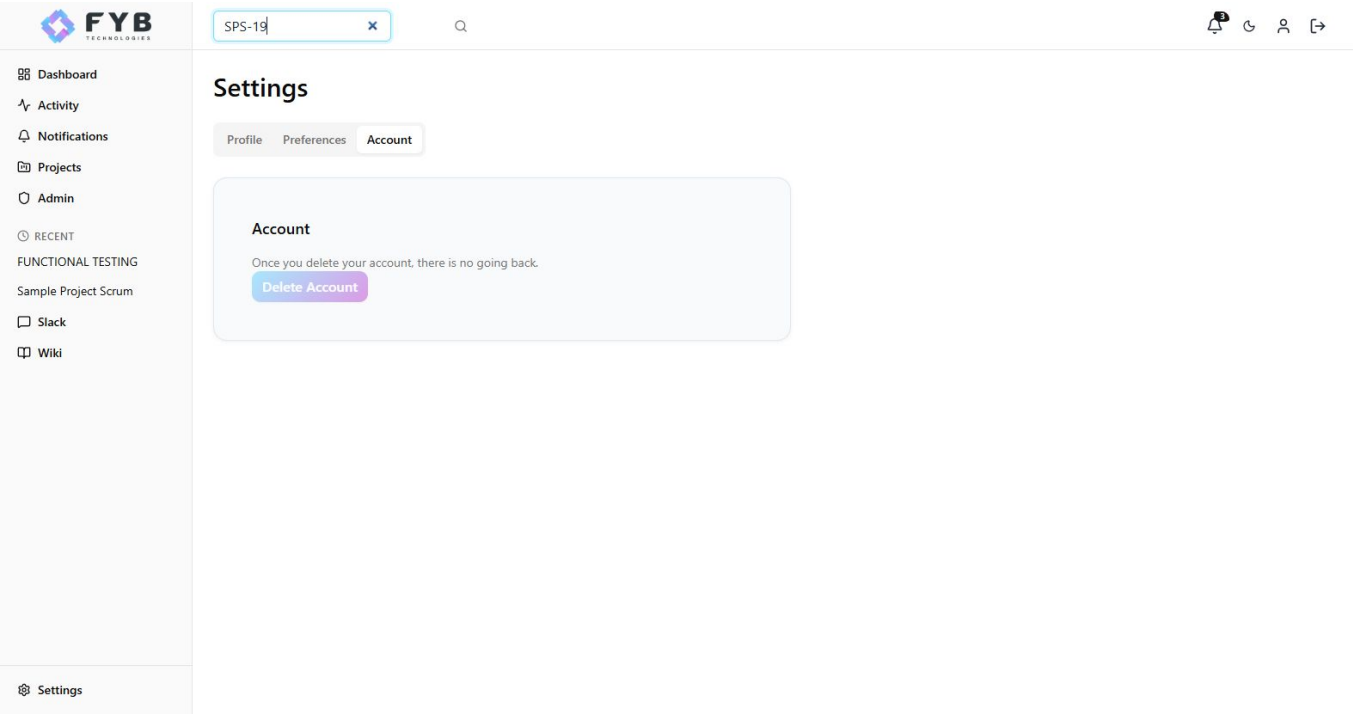

File: project-overview-counts.jpg

Screenshot evidence

E07 - Global search (O03)

Existing issue key entered in global search without a visible search result.

File: global-search-no-result.jpg
